PROFESSIONAL SUMMARY

Software Development Engineer with hands-on experience in full-stack web development, REST API design, and asynchronous programming. Delivered production-quality web applications as a freelance developer on Upwork, with a focus on modular design, database modeling, and performance-conscious code. Strong foundation in data structures, algorithms, and object-oriented design in Java, C, C++, and Python, sharpened through competitive programming on Codeforces. Experienced building containerized, data-driven systems with Docker, PostgreSQL, and Redis, and comfortable working in Linux environments.

WORK EXPERIENCE

Software Developer | Upwork **August 2025 – Present**

- Architected, developed, and deployed full-stack web applications and scalable software solutions using JavaScript (ES6+), Python, SQL, and RESTful web services.
- Engineered dynamic, cross-browser frontends with HTML5, CSS3, DOM updates, and asynchronous browser APIs (fetch, async/await) to maximize UI responsiveness.
- Designed backend architecture, relational database schemas, and persistent storage layers using SQL joins, data validation, and optimized CRUD queries.
- Collaborated with global engineering and business stakeholders to translate complex requirements into clean, maintainable, well-tested code.

SOFTWARE DEVELOPMENT PROJECTS

WORLD-NEWS – Global News Aggregation & Intelligence Engine | GitHub Link

Python | RSS & XML Parsing | HTTP | CLI | Linux

- Built a Python news-aggregation engine that ingests 800+ RSS feeds across 80+ countries and 100+ languages, with an ISO 3166 source registry, country- and language-level filtering, and normalized article output.

ProxyHunter – Proxy Discovery, Analysis & Export CLI | GitHub Link

Python | requests | argparse | JSON | Networking

- Developed a terminal tool that collects and organizes HTTP, HTTPS, SOCKS4, and SOCKS5 proxies with country and protocol filtering, distribution statistics, an interactive mode, and JSON/TXT export.

WebIntel – AI-Powered Web Intelligence Monitoring Platform | GitHub Link

Python 3.12+ | Docker | Docker Compose | PostgreSQL | Redis

- Built a scalable web intelligence and monitoring platform combining web scraping, browser automation, asynchronous task processing, persistent storage, change detection, and optional AI-powered data extraction.

File Integrity Monitor | GitHub Link

Python | Linux | hashlib

- Developed a security utility that hashes files, stores baseline checksums, and detects file modifications or unauthorized state changes using filesystem APIs.

TECHNICAL SKILLS

Languages: Java, C, C++, Python, JavaScript (ES6+), SQL, Bash

Data Structures & Algorithms: Arrays, strings, linked lists, stacks, queues, hash tables, trees, heaps, graphs, recursion, sorting and searching, dynamic programming, greedy algorithms, time/space complexity analysis

CS Fundamentals: Object-Oriented Programming, DBMS, Operating Systems, Computer Networks, SDLC, system design basics

Backend & APIs: REST API design, HTTP/HTTPS, JSON, authentication, CRUD, asynchronous task processing, web scraping, API integration, testing (pytest)

Frontend: HTML5, CSS3, DOM manipulation, responsive design, browser APIs, fetch, async/await, Promises, ES6 modules, event handling

Databases: SQL, PostgreSQL, Redis, relational schema design, joins, indexing, CRUD optimization

Systems & DevOps: Linux, Bash/command line, Docker, Docker Compose, Git, GitHub, cron, virtualenv/pip, Postman, VS Code

Python Libraries: requests, feedparser (RSS/XML), argparse, asyncio, hashlib, pytest, JSON handling, file I/O
Networking & Security: HTTP/HTTPS, proxies (HTTP/SOCKS4/SOCKS5), file integrity and hashing, secure coding basics

EDUCATION

Ghani Khan Choudhary Institute of Engineering and Technology (under MAKAUT), Malda, WB **2020 – 2025**
B.Tech, Electrical Engineering | CGPA: 7.87

BL Indo Align Public School **2017 – 2019**
Higher Secondary Education | 67%

DAV Public School **2008 – 2017**
Secondary Education | 91%

DEVELOPMENT FOCUS & STRENGTHS

- **Problem Solving & DSA:** algorithmic thinking, complexity analysis, and clean implementations in Java, C++, and Python; competitive programming on Codeforces.
- **Full-Stack & API Development:** JavaScript web applications, REST APIs, and database-driven backends with SQL and PostgreSQL.
- **Systems & Backend Engineering:** Linux development, Docker-based deployment, Redis, asynchronous processing, and data ingestion and parsing pipelines.
- **Engineering Practices:** modular design, code optimization, testing, Git/GitHub workflows, and clear collaboration with distributed stakeholders.
